

Icon Style Direction

Three approaches for replacing emoji-based mood and category icons across Hype

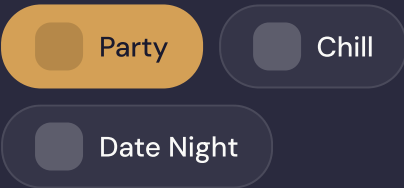

OPTION A

Flat Geometric

Clean, minimal filled icons with simple geometric shapes. Modern SaaS feel. Very legible at small sizes but potentially less warm.

AS MOOD CHIPS

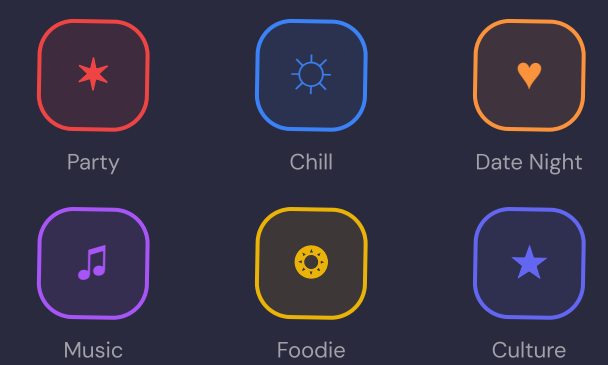

Gemini prompt style:
"Flat geometric icon, single color on transparent background, minimal, [subject], rounded shapes, consistent 2px stroke weight, 512x512"

OPTION B

Warm Illustrated

Slightly organic, hand-drawn feeling. Warm and approachable, matches Sarajevo's character. More personality but harder to keep perfectly consistent.

AS MOOD CHIPS

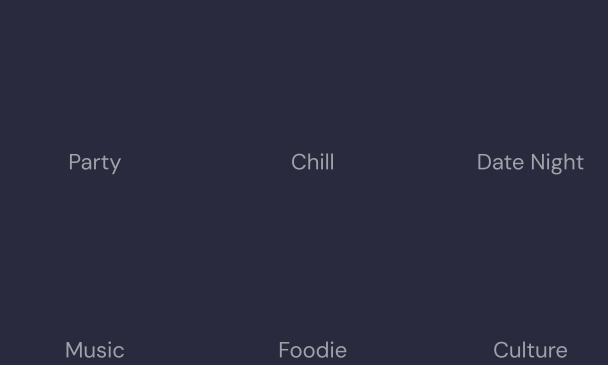

Gemini prompt style:
"Hand-drawn illustrated icon, warm earthy tones, slightly textured brushstroke style, [subject], cream paper texture background, cozy European cafe aesthetic, 512x512"

OPTION C

Soft Glow / Glass

Frosted glass containers with subtle color glow per mood. Premium, nightlife-adjacent feel. Matches the existing tab bar glassmorphism. The most "app-store polished" option.

AS MOOD CHIPS

Gemini prompt style:
"Soft glowing icon, frosted glass effect, subtle colored ambient light, [subject], dark background, premium mobile app aesthetic, 512x512"

Note: These show the UI treatment direction, not the actual generated icons. Once you pick a direction, I'll write precise Gemini prompts for all 12 moods + 8 categories. The generated icons will replace the current emoji usage in mood chips, category badges, card badges, and small UI indicators across the app.
